### **SPRING AI**

#### GENERATIVE ARTIFICIAL INTELLIGENCE CON JAVA

Simone Scannapieco

Corso base per Venis S.p.A, Venezia, Italia

Settembre 2025

## PROGETTO SPRING AI PASSAGGI

- Nuovo string template per richiesta definizione da dizionario in formato utente
- Modifica file GeminiFromClientService.java e GeminiFromClientServiceImpl.java
- 3 Modifica file QuestionFromClientController.java
- 4 Test delle funzionalità con Postman/Insomnia

#### PROGETTO SPRING AI MODELLO DI RICHIESTA

A II path resources/templates viene creato automaticamente da Spring AI in fase di creazione del progetto

### File get-custom-format-definition-prompt.st

```
Dammi una definizione del termine <lemma>, come riporterebbe un dizionario.
La risposta deve essere restituita seguendo il formato:
    '''lemma scritto in maiuscolo e grassetto'''.
    Nella sua forma comune, '''definizione in stile formale e conciso'''.
    Esempi di utilizzo: '''esempi di utilizzo nella forma comune'''.
    Alcune accezioni: '''accezioni con esempi'''.
```

# PROGETTO SPRING AI SERVIZIO GEMINI

#### Interfaccia servizio Gemini (da client)

```
package it.venis.ai.spring.demo.services;
import it.venis.ai.spring.demo.model.Ansver;
import it.venis.ai.spring.demo.model.DefinitionRequest;
import it.venis.ai.spring.demo.model.Question;

public interface GeminiFromClientService {
    String getAnswerFromClient(String question);
    Answer getAnswerFromClient(Question question);
    Answer getDefinitionFromClient(DefinitionRequest definitionRequest);
    Answer getCustomFormatDefinitionFromClient(DefinitionRequest definitionRequest);
}
```

### Implementazione servizio Gemini (da client) - I

```
package it.venis.ai.spring.demo.services;
import java.util.Map;
import org.springframework.ai.chat.client.ChatClient;
import org.springframework.ai.template.st.StTemplateRenderer;
import org.springframework.beans.factory.annotation.Value;
import org.springframework.core.io.Resource;
import org.springframework.stereotype.Service;
import it.venis.ai.spring.demo.model.Answer;
import it.venis.ai.spring.demo.model.DefinitionRequest;
import it.venis.ai.spring.demo.model.Question;
OService
public class GeminiFromClientServiceImpl implements GeminiFromClientService {
    private final ChatClient chatClient:
    public GeminiFromClientServiceImpl(ChatClient.Builder chatClientBuilder) {
        this.chatClient = chatClientBuilder.build():
    QOverride
    public String getAnswerFromClient(String question) {
        return this.chatClient.prompt()
                .user(question)
                .call()
                .content():
```

### Implementazione servizio Gemini (da client) - II

```
QOverride
public Answer getAnswerFromClient(Question question) {
    return new Answer(getAnswerFromClient(question.question()));
@Value("classpath:templates/get-definition-prompt.st")
private Resource definitionPrompt;
@Value("classpath:templates/get-custom-format-definition-prompt.st")
private Resource customFormatDefinitionPrompt:
QOverride
public Answer getCustomFormatDefinitionFromClient(DefinitionRequest definitionRequest) {
    return new Answer(this.chatClient.prompt()
            .user(u -> u.text(this.customFormatDefinitionPrompt)
                    .params(Map.of("lemma", definitionRequest.lemma())))
            .templateRenderer(StTemplateRenderer.builder().startDelimiterToken('<')
                    .endDelimiterToken('>')
                    .build())
            .call()
            .content()):
```

### Implementazione controllore REST (da client)

```
package it.venis.ai.spring.demo.controllers;
import org.springframework.web.bind.annotation.RestController;
import it.venis.ai.spring.demo.services.GeminiFromClientService;
import org.springframework.web.bind.annotation.PostMapping;
import org.springframework.web.bind.annotation.RequestBody:
@RestController
public class QuestionFromClientController {
    private final GeminiFromClientService geminiService;
    public QuestionFromClientController(GeminiFromClientService geminiService) {
        this.geminiService = geminiService;
    @PostMapping("/client/ask")
    public Answer askQuestionFromClient(@RequestBody Question question) {
        return this.geminiService.getAnswerFromClient(question);
    @PostMapping("/client/definition")
    public Answer getDefinitionFromClient(@RequestBody DefinitionRequest definitionRequest) {
        return this.geminiService.getDefinitionFromClient(definitionRequest);
    @PostMapping("/client/definition/custom")
    public Answer getCustomFormatDefinition(@RequestBody DefinitionRequest definitionRequest) {
        return this.geminiService.getCustomFormatDefinitionFromClient(definitionRequest);
```
